Professional Summary

Java Full Stack Developer with 6.5+ years of experience building scalable microservices and enterprise applications for Banking, Insurance, and Payment domains. Expertise in Java, Spring Boot, Angular, Kafka, Azure, Docker, and Kubernetes. Strong background in REST APIs, distributed systems, CI/CD pipelines, security remediation, cloud-native application development, and production support.

Technical Skills

- **Languages:** Java, TypeScript, SQL
- **Backend:** Spring Boot, Spring Cloud, Spring Batch, Spring Security, JPA, Hibernate
- **Frontend:** Angular 12+, Angular Ionic, HTML5, CSS3, Bootstrap
- **Databases:** PostgreSQL, MySQL, SQL Server, Redis
- **Cloud & DevOps:** Azure, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
- **Messaging:** Apache Kafka
- **Tools:** Git, SonarQube, Datadog, Fortify, Kibana, Maven, Gradle, Postman
- **Concepts:** Microservices Architecture, Distributed Systems, REST APIs, TDD, Agile, Scrum

Professional Experience

Capgemini Technology Services Pvt. Ltd. | Senior Software Developer

Dec 2024 – Present | Client: Standard Chartered Bank (Payments & Clearing Domain)

- Enhanced cross-border payment clearing services processing 10K+ daily transactions using Java and Spring Boot microservices with ISO 20022 compliance.
- Optimized PostgreSQL schemas and implemented Flyway migration scripts to support new payment message structures and payload enrichment.
- Developed REST APIs and batch processing workflows for SWIFT channels across AE and Bahrain regions.
- Implemented security enhancements and resolved production defects using Spring Security and observability tools.
- Contributed to SR2025 migration initiatives for TT transfer clearing services aligned with updated SWIFT specifications.

Allstate India Pvt. Ltd. | Developer Consultant

Apr 2022 – Dec 2024

- Designed scalable backend services and REST APIs that improved application scalability by 30% through onboarding of new provinces.
- Built reactive frontend modules using Angular, RxJS, and HttpClient for seamless API integrations.
- Reduced high-priority security vulnerabilities by 50% across enterprise applications.
- Implemented unit testing using JUnit and Mockito, achieving 80% code coverage.
- Developed proof-of-concept applications to validate new features and present end-to-end workflows to stakeholders.

CGI Information Systems | Software Developer

May 2019 – Mar 2022

- Enhanced enterprise backend systems using Java and Spring Boot while resolving long-standing production issues.
- Collaborated with business analysts and product owners to implement new application features.
- Developed responsive frontend components using Angular Ionic for improved user experience.
- Applied TDD practices with JUnit and ensured compliance with enterprise security standards.

Project - Swasth Vault – AI-Powered Healthcare Management Platform

Tech Stack: Java, Spring Boot, Spring AI, Spring Cloud, PostgreSQL, Kafka, Angular, Docker, Kubernetes, Azure

- Developed scalable healthcare microservices for hospitals, doctors, and patients using Spring Boot and PostgreSQL.
- Implemented automated patient monitoring workflows with AI-driven risk categorization.
- Integrated RAG-based medical report analysis using Spring AI for healthcare insights.
- Built event-driven systems using Apache Kafka for asynchronous communication.
- Containerized applications with Docker and deployed on Azure Kubernetes Service using GitHub Actions CI/CD.
- Implemented MCP with real-time chatbot for easy execution of actions and user query.

Education

Bachelor of Technology (B.Tech.) in Information Technology – West Bengal University of Technology

Bachelor of Science (B.Sc.) in Mathematics – Vidyasagar University
